

# sip<sup>d</sup> Data acquisition

New

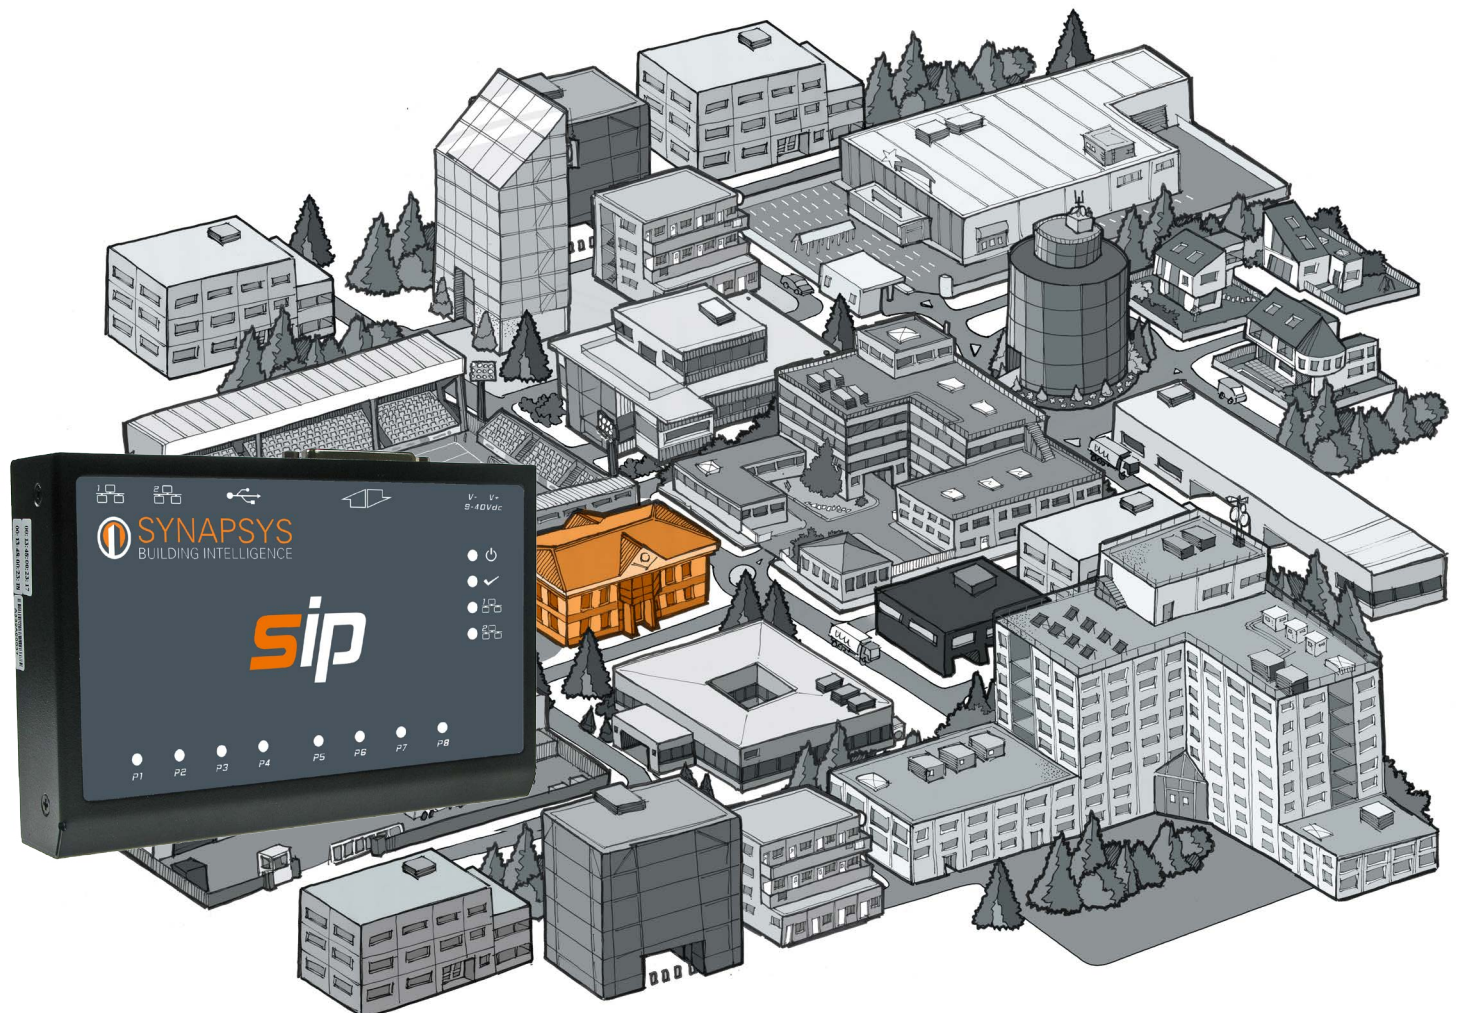

The demand for data from building systems is growing fast as more and more businesses invest in building performance monitoring platforms and that includes data from Building Management Systems, particularly for data mining and data analytics.

The SIPd range easily and efficiently makes available selectable live data values from Trend and BACnet Building Management Systems as either BACnet variables or ModBus registers for remote performance monitoring platforms to collect and incorporate.

Additionally the SIPd can be configured so that these BMS values can be automatically scheduled and exported as CSV files and sent directly to a FTP location.

## SIPd at a glance

- Cost effective retrofit solution for BMS data acquisition
- Solutions for Trend and BACnet BMS
- Live data presented as BACnet or ModBus for remote collection
- Read/Write variant available for remote setpoint etc. alteration
- Automatic CSV file data export
- Simple web based configuration
- Multiple data point types, up to 1000 points
- 2 separate IP ports for network segmentation
